*notes:

CluistROM/eMoyo specification is to calibrate your device at least once per 3 years.

Please consult your local legislative requirements for standard compliant calibration intervals.

Calibration of KUDUwave™ devices can be performed by any qualified laboratory worldwide. Contact us for details of available laboratories in your region. If you would like to suggest a calibration laboratory please contact us and we will make the necessary arrangements with them.

Xcheck is a calibration verification tool intended to replace the need for biological calibration checks. This does not replace the need for calibration in line with your local standards.
